

is an independent energy solutions

provider serving commercial and industrial facilities as well as large residential complexes since 1992.

In addition to its natural gas and electricity commodity products, EnergyRebate offers:

- ▲ Regulatory expertise and industry clout
- ▲ Complete utility bill auditing
- ▲ Retroactive rebates and reduced utility costs
- ▲ Demand side management and consulting services
- ▲ Technology driven solutions, total customer satisfaction.

“EnergyRebate has shown the expertise we require for managing our energy expenditures. Additionally, they are willing to share the wealth of knowledge they’ve acquired over the past ten years in the energy business.”

— Gil Falcon
Facilities Services Manager
Abbott Laboratories

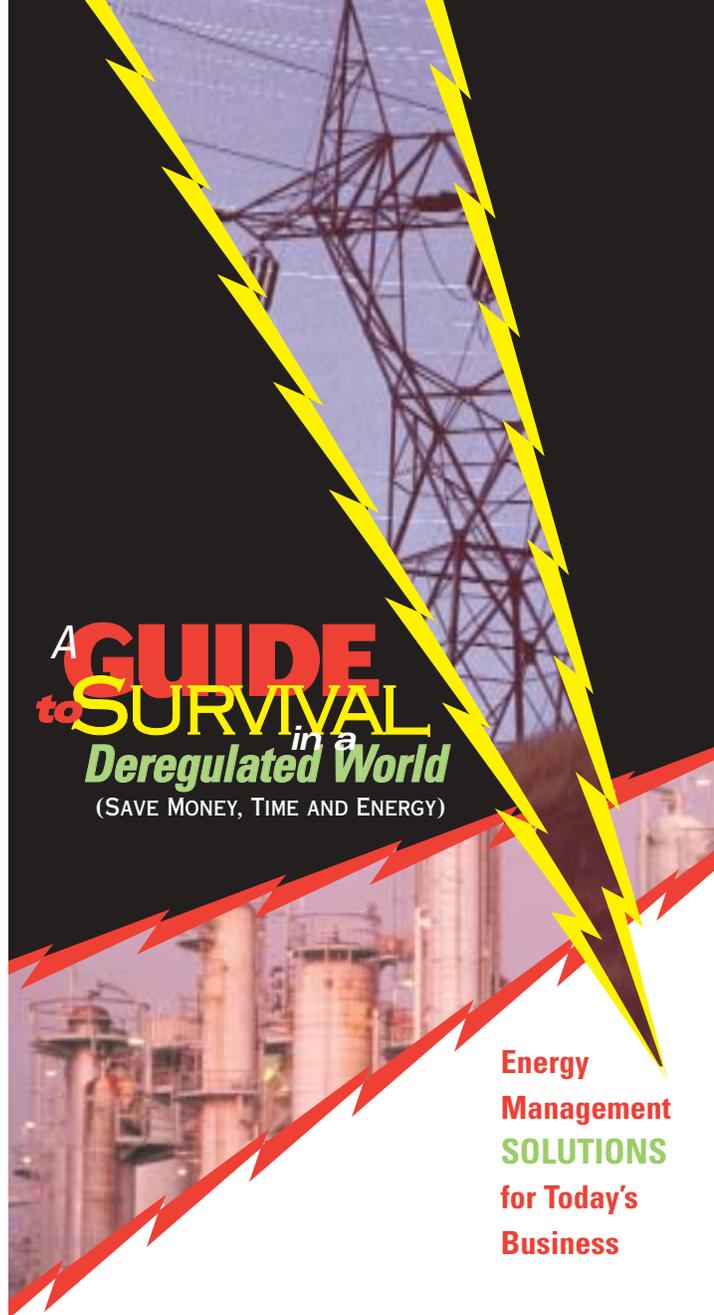

“EnergyRebate understands today’s deregulated energy markets. They secured competitive energy prices that save us money and are guaranteed not to increase over the term of our contract.”

— Stephen T. Jarvis
Property Manager
Millennium Partners

DEREGULATION

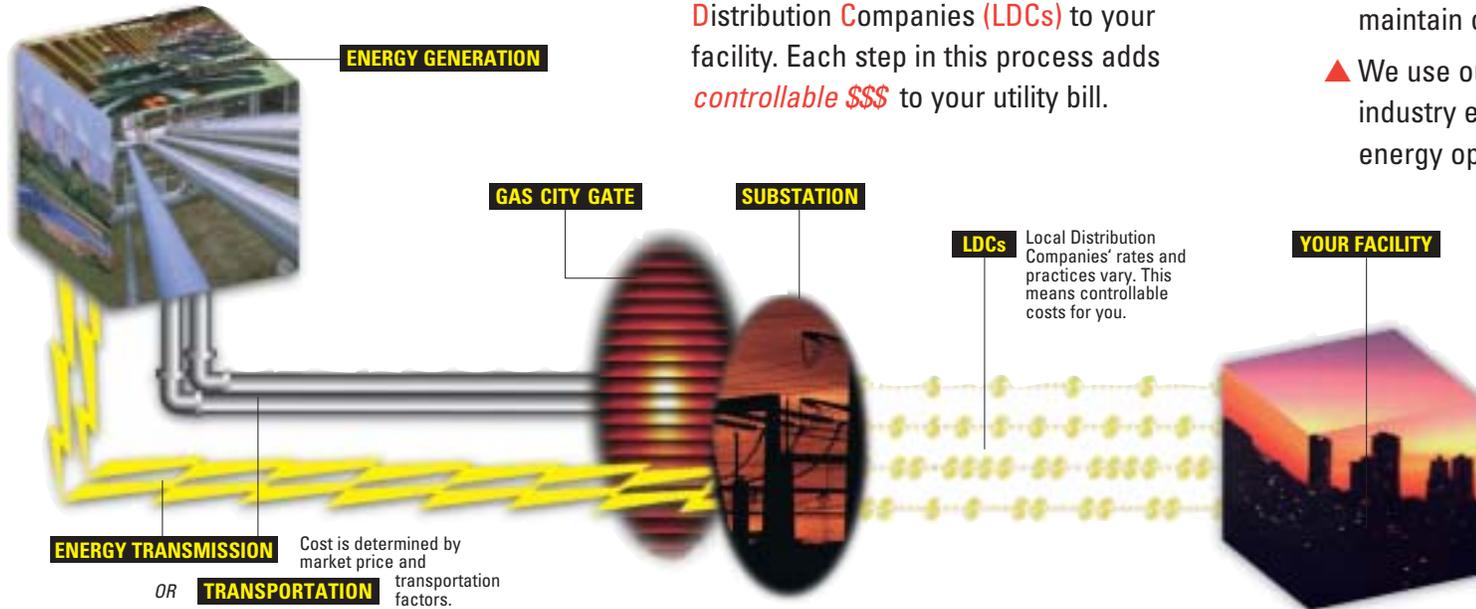

...IT'S CONFUSING, COMPLEX AND IT'S HERE.

Deregulation of electricity and natural gas is here. Somewhere in the confusion...you are supposed to save money on your energy. Energy supply is a traded commodity that requires detailed knowledge of the market to make decisions. You have a lot of energy procurement decisions to make.

Are you ready?

"Can another supplier reduce my costs? When should I buy? What are my pricing options? How am I affected by regulations?"

"Where do I start?"

MAKING SENSE OUT OF NONSENSE.

Understanding the process of energy distribution is the first step to lower your total energy costs.

1. Energy starts at a source, whether it's an electric generation plant or a natural gas wellhead.
2. Energy is distributed through electric transmission lines or gas pipelines. Interstate networks join local networks through a substation or city gate. The commodity cost is controlled by market price and transportation or transmission factors.
3. Finally, the energy is distributed via **Local Distribution Companies (LDCs)** to your facility. Each step in this process adds *controllable \$\$\$* to your utility bill.

ENERGYREBATE

WILL MAXIMIZE YOUR SAVINGS.

OUR FOCUS IS TO MAKE THE ENERGY DELIVERY PROCESS WORK FOR YOU.

We collect and analyze energy data specific to your facility. With you, we determine your energy needs and translate them into a long-term energy strategy.

- ▲ We secure natural gas, electricity, oil and other fuels for our customers.
- ▲ We take advantage of seasonal and market fluctuations on commodity energy products to get the best price for your facility.
- ▲ We team with major suppliers and leverage volumes and technology to maintain our strength.
- ▲ We use our regulatory knowledge and industry expertise to provide your best energy options.

EnergyRebate works for you. *The result* is clear...

significant savings for you.
